WRITTEN STATEMENT OF SUBSTANCE OF INTERVIEW

In response to the telephonic interview between applicant's counsel and the Examiner on January 12, 2006 and the Office communication of January 25, 2006, applicant provides this written statement summarizing the substance of the interview.

REMARKS

Applicant's counsel forwarded to the Examiner a week before the interview a draft copy of the Amendment that was eventually filed in the above-identified application on January 13, 2006. That draft included a listing of the claims but did not include the remarks supporting the amendment.

During the interview, all the claims were discussed, with specific emphasis being placed on the independent claims 1, 25 and 47, which all contained an amendment. Shields and Kang were both discussed with reference to the claims.

134166-1

Appl. No. 10/706,767

Dated January 30, 2006

Reply to Office communication of January 25, 2006

The principal proposed amendment was the addition of the concept of a passivation layer covering only at least a portion of a surface of a semiconductor substrate. The applicant pointed out during the interview that Shields fails to teach or suggest a passivation layer. Further, the applicant pointed out that Kang's "passivation layer" was not a passivation layer in the manner recited in the claims but was instead an encapsulation layer. Applicant amended the independent claims 1, 25 and 47 to capture that distinction. Kang's "passivation layer" covers more than only a portion of the semiconductor substrate surface. It covers the gas sensor device residing on the semiconductor substrate surface as well.

Applicant further argued that the use of "only" in the added claim language was to indicate that the passivation layer covers a portion or more of the surface of the semiconductor substrate but nothing more.

As noted in the Interview Summary, the Examiner agreed with the applicant that such an amendment would render the pending claims patentable over Kang and Shields, either alone or in combination.

Applicant believes that each and every claim pending in the instant patent application is allowable over the cited references. Should the Examiner believe that anything further is needed to place the application in even better condition for allowance, the Examiner is requested to contact applicant's undersigned representative at the telephone number below.

Respectfully submitted,

By 

William Powell
